

LPE19:

The screenshot displays the Visual Studio Code IDE with the following components:

- Editor:** Shows the source code for `LPE19.cpp`. The code includes `<iostream>` and `using namespace std;`. The `main` function prints "Prueba de XOR logico (a ^ b)" and then iterates over `i` from 0 to 2 and `j` from 0 to 2. For each pair, it prints `a ^ b` and whether the result is true or false. The current execution state is at line 18, where `a = 0` and `b = 0`.
- Variables Locales:** A table showing the current values of local variables:

Nombre	Valor	Tipo
a	false	bool
b	false	bool
i	0	int
j	0	int
- Lista de errores:** Shows 0 errors, 0 warnings, and 0 messages.
- Herramientas de diagnóstico:** Displays performance metrics for the current session (0 seconds, 804 ms selected). It includes graphs for memory usage and CPU usage.
- Output Console:** Shows the program's output:

```
Prueba de XOR logico (a ^ b)
a=0 b=0
```
